YOUR MANUFACTURING PARTNER IN SRI LANKA

Shamini Group of Companies brings product design, tooling and component manufacturing together. Our capabilities connect rubber, plastics, soft PVC and metal processing with in-house surface finishing, final assembly and packing.

Our story began in 1985 with rubber component manufacturing in Bingiriya. Today, that experience supports a broader manufacturing offering for customers developing products and sourcing components in Sri Lanka and international markets.

YOUR IDEA IS WHERE OUR WORK BEGINS

We develop complete product designs and support customers working from their own concepts, drawings or samples. We begin with the application and agree the development, production and acceptance requirements around the project.

MANUFACTURING LOCATIONS

Hokandara, Boralugoda, Demalagama and Bingiriya, Sri Lanka. The Group head office is in Hokandara.

DESIGN AND DEVELOPMENT

Every product begins with a purpose. Our design and development work connects that purpose with the materials, tooling and processes needed to manufacture it.

WHAT WE DEVELOP

- Complete product designs and customer design support.
- Moulds, dies and jigs for the agreed manufacturing route.
- Component and assembly requirements.
- Samples and agreed development milestones.

TWO CONNECTED MANUFACTURING ROUTES

Rubber, plastics and soft PVC follow the relevant compression moulding, injection moulding or extrusion process. Metal components follow cutting, forming, machining and welding, then the specified surface finish.
Both routes can contribute to the final product or subassembly. This allows the design to consider how the parts will be made, finished and brought together.

YOUR SPEC. OUR CRAFT.

RUBBER PLASTICS AND SOFT PVC

Our material processing capabilities support moulded parts and extruded profiles for agreed customer requirements.

RUBBER COMPRESSION MOULDING

Component examples include bushes, protective boots, insulators, mud flaps and related moulded products. Materials for review include natural rubber, EPDM, NBR, neoprene, butyl and silicone.

PLASTIC AND SOFT PVC PROCESSING

Injection moulding and extrusion support covers, handles, caps, brackets, end caps and profiles. Material selection follows the intended application and process requirements.

Our wider product portfolio includes vehicle mats, flooring and general-use mat products.

METAL PART FABRICATION

Our metal route connects cutting, forming, machining and welding to produce components and fabricated assemblies.

MANUFACTURING PROCESSES

- CNC laser cutting for sheet and pipe.
- CNC pipe bending and metal sheet forming.
- CNC turning and milling.
- Robotic welding and MIG, TIG and spot welding

Guards, stands, holders, mounting brackets, formed parts and fabricated supports form part of the documented portfolio. Mild steel and stainless steel requirements are reviewed against the part specification.

The component design determines the required operations, tooling and finishing route.

SURFACE FINISHING ASSEMBLY AND PACKING

Finishing and assembly form part of the product's manufacturing plan from the beginning.

IN-HOUSE SURFACE FINISHING

- Surface pretreatment
- Powder coating
- Liquid painting
- Electroplating
- ED coating

We agree the relevant finish around the component material, operating environment, appearance and specified acceptance criteria.

FINAL ASSEMBLY

Rubber, plastic and metal components come together as the agreed product or subassembly. The approved design defines the component interfaces, fitting requirements and final checks.

PACKING LOADING AND DELIVERY

Protection, pack quantities, identification and delivery arrangements follow the order requirements. We confirm the supplied scope and commercial responsibilities during the quotation and order review.

EXPERIENCE AND QUALITY CREDENTIALS

MANUFACTURING RELATIONSHIPS

DPMC Group, TVS Lanka, Senaro, Micro Cars, AIMA, Abans, Singer Mobility, Thimark Technocreations and Dyno.

The rubber spare-parts supply relationship with David Pieris Motor Company dates to 2005. Selected flooring projects include Aliya Resort, Maalu Maalu Resort, Ayurvie Hotel / Ayurvie Weligama and Flower Garden Hotel.

QUALITY MANAGEMENT CREDENTIALS

CERTIFIED ENTITY	CREDENTIAL AND REFERENCE
Shamini Rubber Industries Pvt Ltd	ISO 9001:2015 — 44 100 24395222 IATF 16949 — 0573542
Shamini Automobiles Pvt Ltd	IATF 16949 — 0574036

Certification applies to the named organisations, sites and activities on the certificates. The IATF scopes exclude product design responsibility. The Group's broader design services do not extend those certified scopes.

OPPORTUNITIES ACROSS INDUSTRIES

We welcome component and product development enquiries from any industry. Material suitability, manufacturing feasibility and application-specific qualification requirements determine the agreed project scope.
